EDUCATION

University College London | MSc Computational Finance **2026 - 2027**

- Relevant Modules: Probability Theory and Stochastic Processes, Numerical Methods for Finance, Advanced Machine Learning in Finance, Applied Computational Finance, Research Computing with C++, Financial Engineering

University of Exeter | BSc (Hons) Accounting and Finance | *(1st Class with Honours)* **2023 - 2026**

- Relevant Modules: Advanced Mathematics for Economists (*84%*), Machine Learning for Economics (*84%*), Futures and Options (72%)
- **Awards: Dean's Commendations for Exceptional Performance (In both years 2 & 3)**

PROJECTS & COMPETITIONS

Cambridge Battlecode (team project, sponsored by Hudson River Trading) **Oct - Nov 2026**

- Peak position as 5th in the UK (800+ teams) in a month-long C++ competition focused on strategy, simulation, and iterative bot refinement

IMC Prosperity IV *(solo, ~18,000 participants)*: **April 2026**

- Joint 1st worldwide on Round 1 Manual auction challenge. Built a custom object-orientated log-file parser with visual analytics; Identified and exploited a pair of offsetting bots posting orders several standard deviations from fair value

Fullhouse Hackathon: **June 2026**

- Built an adaptive poker bot using gradient-boosting opponent modelling and iterative self-play strategy refinement inspired by AlphaGo's training pipeline to take into account both board state and individual player behaviours

***Market-Mate*:** (team project, sponsored by Google Deep Mind and Jane Street) **Nov 2026**

- Built Market-Mate at the Agentverse hackathon, which is a real-time social prediction market that turns group-chat bets into a live order book, with multi-agent intake and a deterministic zero-sum engine

US CPI forecasting *(FRED-MD):* **Dec 2025 - Jan 2026**

- Built a walk-forward backtest on the FRED-MD macro panel comparing 12 models for US CPI inflation forecasting; Elastic Net delivered the lowest out-of-sample error while selecting a sparse set of predictors

WORK EXPERIENCE

Summer Analyst, Broad Reach Investment Management, London **Jul 2025**

(EM macro hedge fund, $2.6bn AUM)

- Developed a momentum-based trading strategy using moving average derivatives to identify trend reversals; approach validated by quantitative team independently developing similar methodology
- Analysed monetary policy, growth outlook, and inflation, to assess investment opportunities in the firm's specialised EM portfolio

SKILLS & INTERESTS

Skills

- Programming Languages (Object Oriented): Python: NumPy, pandas, scikit-learn, matplotlib | C++
- Mathematics: Linear Algebra, Probability Theory, Real Analysis, Stochastic Calculus

Sailing Instructor, Sutton Bingham Sailing Club, Yeovil **2017 - 2023**

- Led a team of instructors to assist in teaching students

Marine Conservation Society Part-time Volunteer, Bridport, Dorset **Jul - Sep, 2025 - 2026**

- Documented observations of marine species and coastal habitats to support conservation research efforts along Lyme Bay

Hobbies: Scuba diving, Free diving, Sailing
